

PROCONT company is involved in trade, engineering and production. The trade is focused to delivery of wide variety of industrial automation components. The crux of engineering and production is design, projection, production and supply of industrial automation, electronic and material handling systems.

From early beginning, the company was involved in design of control and regulation systems in the field of manipulation technology, the control of production lines and technological processes. The professional knowledge and experience of the company's staff ensure the effective solution of automation projects for the customers. Company realize turn-key solutions in industrial automation from design, production, assembly of industrial automation systems, making user software to the final start-up and site commissioning.

PROCONT company offers automation solutions for various industries by utilizing the components of the best known producers.

#### Key Benefits:

- Fully trained staff of engineers and field technicians
- We utilize the latest software and hardware
- In-house panel shop to build your application specific control panels
- Stable company to ensure your long-term satisfaction

#### Industrial Automation Capabilities:

- Application Engineering
- Develop control system specifications
- Hardware/Software applications
- System Engineering
- Drive Systems
- Documentation Services
- Integration/Startup
- Project planning
- Project management
- On-site installation
- Start-up services
- Control system tuning
- Conversions
- Convert or upgrade PLC systems

#### Material Handling Activities:

Design and production of:

- Manipulators
- Balancers
- Conveyors
- Stacker Cranes (manually and automatically operated)
- Automated warehouse systems

## PROCONT company references:

### Wood-processing Industry

- log processing - wood basic industry
- fiberboards production

### Electrical Industry

- production of insulating materials

### Energy Industry

- thermal power production (engine boilers)
- utility monitoring system

### Metallurgical Industry

- foundry production lines
- wire production (drawing and coiling)
- wire anodic treatment lines

### Material Handling

- automated warehousing systems
- conveyors, stacker cranes
- robots and manipulators

### Food Processing

- malteries and breweries
- starch and gluten derivate production
- fodder crops production
- salt production

### Glass Industry

- surface treatment of glass

### Building Materials

- drying and burning of bricks
- cement production raw material dosing

### Machinery

- assembly lines
- automated production lines

### Water Utility

- drinking water distribution
- waste water treatment
